DIGITAL TEMPERATURE CONTROLLER

The controller is a compact, feature rich, intuitive FAT Temperature Controller for wall-mounting. FAT stands for Fast-Adaptive-Tuning. A novel algorithm permanently adjusts the control parameters to the control process. The common adjustment of PID controllers or the execution of an auto tuning procedure is obsolete. The self-optimizing controller logic leads to an efficient adaptation to any closed-loop controlled pass and quickly reaching adjustment between set-point temperature and actual (temperature) value. All functions are easily accessible via the text menu display and can be easily reached and set via the buttons on the control panel. The unit is equipped with wear-free electronic for prolonged lifetime. A multi-colored LED is signaling the different operating modes, easily view-able in the distance. The electronics are protected against overcurrent and high thermal load.
